Meeting 28 July

Harriet Notes	Meeting Comments
Uncertainty - Made all plots - Working on generating data - Do you think I should focus on simulating data (its what ive been doing and idk if this has application or is useful) - Or should I focus on finding existing data with models that will generate this output	- Find bimodal papers and read them for examples - All data for the experiment should be simulated. Try simulating all models - Parameter to change the size of the parameter we are looking at (bimodal = how far apart the modes are) - https://cran.r-project.org/web/packages/gghdr/index.html
Life (or alternative time holes) - Had to do a bunch of wisdom teeth and hand dr appointments this week - Also have been organising stuff for the semester (i.e. ETC3580 and BEX6510)
